

Install Treadlite in just **5 easy steps!**

BEFORE TREADLITE:

Prepare your surface so it is **level.**

Levelling the surface is crucial as it will help to prevent any accidents or injuries due to uneven terrain; it will also result in a better surface once the Treadlite is applied. If your arena is not naturally level, you may need tools like a shovel, rake, or grading equipment to create a level surface.

TREADLITE ARRIVES:

Grid your arena into equal sections & place the bags.

Divide the arena into equal sections. This will help you to distribute the bags evenly and ensure that the weight is spread out evenly as well.

Divide the arena into equal sections, this will help you to distribute the bags evenly.: Start placing the bags in each section, working from one end of the surface to the other. Make sure that the bags are placed in a straight line and that they are evenly spaced apart.

TREADLITE ARRIVES:

Open and allow the Treadlite to spill out.

You can use a tractor or bobcat's bucket to push or tear open the bag, allowing the Treadlite to spill out.

If you do not have suitable equipment, the crane truck that delivers Treadlite can open the bags on the arena. (There is an extra charge for this).

The use of a tractor or bobcat to open up Treadlite bags can be a safe and efficient method, but it's important to take proper precautions to ensure the safety of both the equipment operator and those nearby.

TREADLITE ARRIVES:

Spread Treadlite using what you have on hand.

Spreading Treadlite can be done with a rake, levelling bar, chain harrows or back blade. Whichever your tool of choice, the aim is to acheive a uniform distribution of Treadlite across the desired area. This may require several passes as you work to cover the entire area and adjust the depth and level of coverage as needed.

Note: The key is keeping Treadlite on the surface. It is not required to Harley Rake or power harrow the Treadlite into the sand.

TREADLITE IS READY TO RIDE:

Let it settle, then **groom** to achieve your desired feel.

Once the Treadlite has settled you are able to ride on the surface, but you may need to do some additional grooming to achieve the desired feeling. This can involve using harrows, drags, a rake or other tools to smooth out any uneven areas.

If you have any questions or concerns, our team are a phone call or email away.
